17th August 2026

Project Overview

PROJECT NAME :

To-Do list

OBJECTIVES:

- To create a simple To-Do List using Python.
- To learn how to use Python lists.
- To add tasks using the `append()` method.
- To display stored tasks using loops.
- To understand basic Input, Process, and Output operations.

ABOUT PROJECT:

The To-Do List is a Python programming project developed as part of the DecodeLabs Industrial Training. The main purpose of this project is to create a simple program for managing tasks. The program allows the user to add tasks and store them in a Python list. The stored tasks can then be displayed to the user. The project focuses on basic Python data management using lists, the `append()` method, and loops.

Project Objectives AND Requirements

Objectives

- 1.The main objectives of this project are:
2. To create a simple To-Do List using Python.
- 3.To learn how to create and use a Python list.
- 4.To add tasks using the append() method.
- 5.To display stored tasks using loops.
- 6.To understand basic input, processing, and output.
- 7.To develop basic programming logic.

Requirements and Main Components

3. Requirements
Programming Language: Python
Software Used: Python IDLE

Main Concepts:
Lists
append()
input()
print()
while loop
for loop
if-elif-else

Working of the Project:

step-1:Create a list

An empty list is created to store the tasks.

i.e tasks=[]

step 2:Display the menu

The program displays three options:

- i.e
- 1.Add Task
 - 2.View Task
 - 3.Exit

step-3: Add a Task

The user enters a task.The task is added to the using:

i.e tasks.append(task)

step-4:View Tasks

The program uses a loop to display all the tasks stored in the list.

step-5:Exit

When the user selects Exit,the program stops.

Source Code:

Python Source Code

The following code implements the To-Do List using a Python list, loops, conditional statements, and the append() method.

```
todo_list.py - C:/Users/SAMIKSHYA SAHOO/AppData/Local/Programs/Python/Python313/todo_list.py (3.13.15)
File Edit Format Run Options Window Help
tasks=[]
while True:
    print("\n1.Add Task")
    print("2.View Tasks")
    print("3.exit")
    choice=input("Enter your choice:")
    if choice=="1":
        task=input("Enter your Task:")
        tasks.append(task)
        print("Task added sucessfully!")
    elif choice=="2":
        print("\nYour Choice:")
        for i in range(len(tasks)):
            print(i+1,".",tasks[i])
    elif choice=="3":
        print("Thank You!")
        break
    else:
        print("Invalid choice!")
```

Outputs:

Output 1 - Main Menu

Output 2 - Adding a Task

Output 3 - Viewing Tasks

```
(AMD64)] on win32

_list.py

1.Add Task
2.View Tasks
3.exit
Enter your choice:1
Enter your Task:FINISH PYTHON PRATICAL
Task added sucessfully!

1.Add Task
2.View Tasks
3.exit
Enter your choice:1
Enter your Task:COMPLETE DATA STRUCTURE PRATICAL
Task added sucessfully!

1.Add Task
2.View Tasks
3.exit
Enter your choice:2

Your Choice:
1 . FINISH PYTHON PRATICAL
```

```
1.Add Task
2.View Tasks
3.exit
Enter your choice:2

Your Choice:
1 . FINISH PYTHON PRATICAL
2 . COMPLETE DATA STRUCTURE PRATICAL

1.Add Task
2.View Tasks
3.exit
Enter your choice:3
Thank You!
```

Conclusion

The To-Do List project provided practical experience with basic Python programming concepts. Through this project, I learned how to create a list, add tasks using the `append()` method, and display stored tasks using loops. I also learned how the Input, Process, and Output model can be applied to a simple Python application. This project helped me improve my understanding of data management and programming logic.

The project document explains that this first milestone builds the foundation for handling data before moving toward more permanent storage such as files or databases.

THANK YOU
